

Microsoft Dynamics 365 Fire & Safety

Dynamics 365 for Fire & Safety is a fully integrated online or on-premise Fire Risk Management System. It offers the ability to complete all the functions of a modern day fire and rescue service but remains flexible enough to adapt internally to political, technological and social change. Our solution comprises a range of modules including **Protection, Prevention** and **Fire Investigation**.

Dynamic Risk Engine

The modules are underpinned with a Dynamic Risk Engine that enables existing risk criteria and weightings to be easily altered to reflect changes in the FRS's operating environment. This provides a consistent approach to risk scoring and calculation across all prevention and protection activities, as well as for managing and highlighting operational risks to firefighters.

Microsoft Dynamics platform

We have built Connect Fire on the world leading Microsoft Dynamics platform which enables the capture and management of information in a consistent manner across all modules.

Key Benefits

- ✓ **Holistic view of all community data**
Single premises and persons database enabling the efficient tracking of all fire safety activity
- ✓ **User friendly**
Consistent user experience across all modules with context sensitive forms and screens
- ✓ **You're in charge**
Simple customer control and administration of future enhancements and changes
- ✓ **Real time performance monitoring**
Live management dashboards
- ✓ **Cloud based**
Full off-line working and mobile capability
